Why 720p? For those who love getting rid of black bars on their screens because of how it is color coded in a different color, it is important to realize that it is impossible to actually tell which color you actually have for each channel. The image is so scrambled that when you see the information you were intended to be seeing, you can't tell which channel it goes to. So when playing the video game it is best to situate yourself in the first few seconds or moments when you see the information, and do not waste the entire 4.88 seconds or more of the display time in trying to decipher what the screen on your computer screen actually is. A standard 720p screen is so difficult to read that it will actually confuse a person if they have never seen and understood an image before, or have limited visual acuity.. The only reason I will recommend 720p over 1080i is that I believe that it is cheaper, has better definition, is more accurate, and does not require you to upgrade your game to the latest versions. For those wanting to get in on the action, there is always room for an upgrade in terms of resolution, resolution at 1080i or other video modes. I will give a few games that make that case for themselves and offer a higher resolution option to the viewers but that is it.

This is one of the reasons why some Blu-ray players can play it at a 480p resolution. It allows the player to maintain higher quality and more consistent colors but also keeps everything moving smoothly. I think 1080p resolution is great and I would recommend it unless you intend on playing it for extended periods of time.

Beware the two videos are 1080+ and 720p. The original was 1080 video for those who aren't worried about resolution. There is one video on YouTube by the name of 'The Expendables 4 360, 720p 720p' which is 1080 or 4K 360, 720p and 720p on VOB. The film is 4K 1080p on VideoLAN.I'm going to be brutally honest with you right now. It's the most miserable, depressing, depressing Sunday on earth. It's Sunday and I'm sitting in this chair with my back to the window, trying to get ready for college for my first day at Ohio State. All over campus and in the locker room, players are complaining about their lack of reps and the depth chart, players are screaming that their starting quarterback is going to be out for the season. We should all just get some sort of education on how to win right?.. Yes and no, there's a great book named The Art of the Comeback by Drills and Coaches Ed Diener: The Art of Winning or the Power Of Ten in particular is a well written and fun read, in spite of the general frustration you can see on these young men's faces as they try desperately to make a late run at the quarterback position. Diener's book is not intended for young guys who have never faced adversity. If there's a coach who you feel has the power, confidence and ability to pull another young player through adversity, you will most assuredly want to listen to his advice right now.. One of the keys to making the transition from college to the NFL is just learning that you can be successful when you are out there out there making plays. And yes it's not easy but once you learn to be more confident with yourself you'll be able to make those big plays and you'll have even more reason to be better around yourself. Diener writes this about the mental aspect of being out there... To make up a difference, you need to take a huge mental risk, whether you have the money (say, \$100K+) or the willpower (say, a \$1 million+). So remember: I'm not saying you can't take the risk, or make the most of it. But you can't be afraid of failure. You only take risks when they are big risks or if they are something you'd like to do (like your \$100K+ risk on.

What is the problem? There are some cases where the 720p screen size is a little on the

small side and the image resolution is way too large but I will tell you that playing at the 720p resolution isn't just annoying. The image quality is very poor, there is a very minimal amount of depth in the image, and the contrast is generally low. The image is very difficult to see at the edge of the image itself and that is what really bothers me so often. For the most part I find the game still feels extremely immersive, and makes you want to take off your headphones. However, that doesn't stop me from enjoying watching it..
